WWW.MSSCO.CO.UK
WWW.MSSCO.CO.UK

- Wide selection of patterns for all facets of surgery with many WELMED INSTRUMENTS exclusive specialties
- five different Tungsten Carbide insert styles for needle and suture sizes up to 10-0.
- Precisely machined and handcrafted for longlasting performance
- gold-plated ring-handles for easy identification

Serrations: 0.5 mm - REGULAR

REGULAR

This tooth size is ideal for use in standard pattern needle holders like Mayo-Hegar, Mathieu, Bozeman a.o. And in needle-pulling tissue forceps. For holding large needles with sutures sized 3-0 and larger.

Serrations: 0.4 mm - FINE

FINE

Best for use in needle holders such as Crile-Wood, DeBakey, Ryder, a.o. And in delicate needlepulling tissue forceps. For holding needles and sutures between 4-0 and 6-0.

Serrations: 0.65 mm - COARSE

COARSE

This coarsely serrated insert is placed in the most powerful needle holder patterns and wire twisters and assures maximum holding ability when using heavy needles or surgical wire.

Serrations: 0.2 mm - MICRO

MICRO

This micro size is extremely effective for use in microsurgical needle holders like Castroviejo, Mini-Ryder, Microvascular, Lemmon and other microoriented needle holders. For use with the most delicate needles and sutures from size 7-0 to 10-0. Excellent delicate needle holding ability without minimal damage to needle or suture.

SMOOTH

The smooth insert is designed to hold the smaller suture sizes without damage to the suture or needle. Its needleholding ability is somewhat limited, however. Used primarily in needle holders for plastic surgery and microsurgery.

An IUD in place but no visible thread...?
Here is your help:
The shaft of the IUD removal forceps has the same diameter as the cervical canal. It can be used without dilation and without anaesthesia. Its jaws with finely serrated TC-inserts get a firm grip of the IUD (. . . Or its thread) for safe and simple removal.
