The special clamp makes it possible to clamp the vena cava interior above the liver according to the anatomic condition. The lock at the upper end of the jaws fixes firmly the part of the jaws of the clamp after it is placed. Thus impeding the vena cava interior -clamped together with diaphragm- from slipping out.

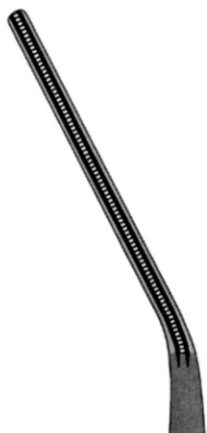

Se facilita la colocacion amoldada de la vena cava interior sobre el higado, por causa de la forma anatomica de la pinza clamp especial. El cierre a la punta de la mandibula sujeta firmemente la pinza clamp y evita que se escape la vana cava interior con el diafragma.

Le clamp special permet un clamping atraumatique de la veine cave interieure au-dessus du foie, adapte aux conditions anatomiques. L'anneau terminal permet de maintenir les mors joints evitant ainsi le glissement de la veine cave superieure clampee avec le diaphragme.
